

SAI SRIKAR B

Chennai, Tamilnadu

AI ENGINEER

saisrikar1220@gmail.com

EXECUTIVE SUMMARY

Aspiring Machine Learning Engineer (graduating 2029) with hands-on experience designing, building, and deploying end-to-end AI systems - a real-time AI agent using Google ADK. Skilled in Python, ML pipelines, deep learning and prompt engineering. Experienced in rapid POC development, model experimentation, and translating ambiguous business problems into working statistical and deep learning solutions. Passionate about democratizing AI through scalable, production-ready ML infrastructure - eager to contribute to Apple's Global Business Intelligence team by building intelligent systems that power data-driven decisions across Retail, Finance, Operations, Marketing, and beyond.

EDUCATION

RAJALAKSHMI ENGINEERING COLLEGE

Bachelor's in AI and data science

2025 - current

VELAMMAL NEW GEN SRT

Senior secondary education

2023 - 2025

VELAMMAL NEW GEN MVM

Junior secondary education

2016 - 2023

SKILL

- Machine Learning & Deep learning
- Python & statistical programming
- Feature & data augmentation
- ML Pipeline Design & Automation
- LLM Fine-Tuning
- Model Optimization & Compression
- POC Prototyping
- Data Processing & ML Infrastructure

LANGUAGE

- English
- German

CERTIFICATE

GOOGLE AI&ML ENGINEER

NOV-25

Foundations of machine learning, neural networks, and AI applications - covering supervised/unsupervised learning, model evaluation, and real-world deployment.

GOOGLE CYBERSECURITY SPECIALIZATION

AUG-25

9-course program covering threat detection, SIEM, Linux, SQL, network security, and Python automation - 100+ hours of hands-on labs.

PROJECTS

RISONANZA

SEP -25

Built a real-time voice emotion classifier using Python, Librosa (MFCC/chroma feature extraction), and Scikit-learn. Achieved 85% accuracy in classifying emotional states from audio input. Deployed an interactive interface via Streamlit. Presented at a hackathon.

DOS ATTACK

NOV-25

Built a controlled Denial-of-Service attack simulator in Python using multithreading to demonstrate network vulnerability concepts.

MOVIE AND TV SHOW TRACKER

JUNE-26

- Developed a full-stack Movie & TV Show Tracker application using React Native (Expo) for cross-platform mobile frontend and Flask + SQLite for the backend REST API
- Integrated the TMDB API to fetch real-time metadata including posters, ratings, genres, and episode details for thousands of titles
- Implemented a Tinder-style swipe interface for intuitive content discovery, allowing users to add or dismiss titles with gesture-based interactions
