Chennai, Tamil Nadu, India

Email: saisrikar1220@gmail.com | LinkedIn: linkedin.com/in/sai-srikar-b-54b1b8359 | GitHub: github.com/Saisrikar20

PROFESSIONAL SUMMARY

AI & Data Science undergraduate (Cybersecurity Honours, CGPA 8.9) skilled in Python, machine learning, and applied network security. Builds full-stack ML and security projects from first principles, from model architecture through debugging. Seeking an internship to apply machine learning and cybersecurity skills to real-world systems.

SKILLS

Languages: Python, Java, C, SQL

AI / ML: Machine Learning, NumPy, Pandas, Polars, scikit-learn, LangChain, LangGraph, Deep Learning, Natural Language Processing (NLP)

Security & Tools: Kali Linux, Wireshark, Ethical Hacking, Network Security, SIEM, Vulnerability Management, Git, Linux, Hack The Box

PROJECTS

MailShield-AI – Offline Email Classification System

github.com/Saisrikar20/MailShield-AI

- Built a privacy-first, fully offline email triage system using a dual-model machine learning ensemble (Phi-3 + Mistral via Ollama) with a custom Retrieval-Augmented Generation (RAG) engine and IMAP integration – no data leaves the machine.
- Designed the model-voting and explainability logic (Inbox Explorer) so every classification is traceable to a model or a prior user correction.

ML Projects Portfolio – Machine Learning from First Principles

github.com/Saisrikar20/ml-projects-portfolio

- Implemented linear regression and an SVM-based diabetes classifier from scratch without high-level ML libraries; found and fixed a data leakage bug in the pipeline.
- Iterated a Sonar Rock-vs-Mine classifier through 8 model versions to reach approximately 90.5% test accuracy, using NumPy and Pandas for preprocessing and evaluation.

Risonanza – Real-Time Voice Emotion Classifier

risonanza.streamlit.app

- Built a real-time audio emotion and stress classifier in a 24-hour hackathon, reaching 85% accuracy using Librosa for feature extraction and scikit-learn for modeling.
- Deployed a live, interactive demo with Streamlit under a hard team deadline.

PortScanner – Multithreaded Network Security Tool

github.com/Saisrikar20/PortScanner

- Built a multithreaded TCP port scanner in Python to identify open services and assess network exposure, using concurrency to improve scan speed.

EDUCATION

Rajalakshmi Engineering College, Chennai

Jul 2025 – Jul 2029

B.Tech, Artificial Intelligence and Data Science (Cybersecurity Honours Track) – SGPA: 8.9/10

Velammal New Gen, Surapet

Jun 2023 – May 2025

CBSE Class 12, Computer Science with Mathematics – 472/500 (94.4%)

CERTIFICATIONS

Google Cybersecurity Professional Certificate (Coursera) | Ethical Hacking with Kali Linux (IBM) | Introduction to Artificial Intelligence (LinkedIn Learning)
